

Prime-Dent[®] Resin Based NE Temporary Cement

Prime Dental Manufacturing, Inc.

This cement may be used for: cementation of crowns, bridges and splints; retention of temporary crowns sealing dressing in teeth during root canal therapy procedures; trial cementation of permanent restorations prior to final insertion; testing of interproximal contact prior to final placement. Insoluble in mouth fluids and retains a tight marginal seal to prevent seepage of these fluids under the restoration. The cement will withstand functional stresses and permit ease of removal. In addition it has sufficient flow to facilitate complete seating of the restoration. The product is intended for use less than 30 days.

Automix System - Syringe Kit **45-23013 \$49.99**

Contains: (4) 6 gm. syringes (3 gm. base & 3 gm. catalyst), 20 mixers
